

Supporting Modules

In order to have mUzima mobile work with OpenMRS™ specific modules have been developed with various functionalities.

These modules adds links to the OpenMRS homepage where you can click to access the module:

1. **Muzima-core Module:**

This is the core module for mUzima. The module:

- a. Manages mUzima data sources
- b. Allows for management of [mUzima forms](#) within an OpenMRS instance.
- c. Receives payloads from mUzima mobile clients
- d. Processes the payloads using different data handlers and [Muzima Teleconsultation Module](#)
- e. Manages [Error Queue](#) for all payload data that did not successfully process to OpenMRS
- f. [Expanded cohort](#) management (Dynamic cohorts)

2. **Muzima Teleconsultation:**

- a. Receives tele-consultation payloads and processes them to OpenMRS
- b. Manages tele-consultation notification

3. **Muzima Biometrics:**

Adds finger printing technology to mUzima space.
