

User Guide

As a community, we endeavor to create a comprehensive user guide for mUzima and related technologies.

Our goal is to give you the tools to install, configure, and use mUzima in a test or production environment in a quick and reliable way.

While going through the process of installing, configuring, and actually using mUzima, you will gain knowledge about the app. We count on users like you to add documentation and/or improve the current documentation. Feel free to contribute so future users don't have to struggle with similar issues.

If you are a developer, the [Developer Guide](#) is what you are looking for.

Requirements

mUzima as technology has two (2) sections:

- The mobile app
- The server side (currently only OpenMRS and its distributions are supported)

OpenMRS

- To install, configure and run OpenMRS, visit its [documentation](#). If you are interested in running a test environment, we recommend you use the [OpenMRS Standalone](#).
- The [OpenMRS appliance](#) is also a quick way to get a running instance of OpenMRS (*This effort has been retired and replaced with [OpenMRS Standalone](#)*).
- Once this is installed proceed to install the mUzima [specific modules](#).

mUzima Mobile

- Install the mobile app following [this instructions](#).
- Configure mUzima as described in [this document](#)
- Follow [this guide](#) to learn how to use mUzima
